

Evolution

Across

- 11.** Measure of an organisms ability to survive and produce offspring relative to others in the population
- 12.** Inherited trait that's selected for over time because it allows organisms to better survive
- 13.** Seasonal movement of animals from one region to another

Down

- 1.** Evolution toward similar characteristics in unrelated species
- 2.** Physical features of an organism that are changed to survive better
- 3.** Change in a species DNA to cause unusual characteristics
- 4.** Body part that is similar in function as a body part from another organism but different structure
- 5.** Adaptation in order to help maintain homeostasis

- 6.** Process by which humans modify a species by breeding for certain traits
- 7.** Evolution of one or more closely related species into different species
- 8.** Organisms that have inherited beneficial adaptations from producing more offspring
- 9.** Change in allele frequencies due to chance alone, mostly in small populations
- 10.** Change in species over time
