

# Ecology

## Across

2. Sunlight/chemical energy converted into forms that cells can use
3. Eating something
8. Network of animals feeding habits
9. Ecosystem that has close to the same climates and organisms.
12. an organism deriving its nutritional requirements from complex organic substances.
14. organisms in an ecosystem that produce biomass from inorganic compounds
16. of organic compounds by bacteria or other living organisms using energy derived from reactions involving inorganic chemicals, typically in the absence of sunlight.
17. Living factors in the environment.
19. Living in a place together with their physical environment is known as what?
21. Similar organisms that breed/produce
23. A group of individuals of the same species.
24. Place on earth where life is

## Down

1. A consumer that eats Meat.
4. The steps in a food web/chain
5. Why are plants green?
6. An organism that gets energy by breaking down the remains of dead organisms.
7. Eats already dead or found animals
10. A series of of steps how organisms transfer food into energy
11. None living part of a environment
13. Eats plants
15. an animal that feeds on dead organic material, especially plant detritus.
18. Population as a whole
20. Eats both plants and animals
22. The study of interaction between organisms and their environment.
