Ap PSychology Review

<u>Across</u>

1. principle to notice a differnce in the stimuli

- 3. a mental grouping of similar things
- 6. decreased response to a stimulus
- 9. anxiety causing memories to be
- unconsciously forgotten

12. understood or expected rules of behavior

13. records electrical activity of the brain, neural impulse

16. inability to see from fresh perspective

17. tendency to approach problems in a

particular way that is familiar

18. sending or perceiving another

persons thoughts

19. adaptive, triggered by amygdala

20. "ah-ha" moment, a sudden realization

25. the middle score

- 26. retention of encoded information
- 28. the loss of memory
- 29. destroying or removing brain tissues
- **32.** control center for the brain
- 33. founder of observational learning

34. accuracy

35. constant results

<u>Down</u>

2. memory aids of memory techniques

4. lets light into the eye

5. ability to learn from experience

and adapt to new situations

7. logical side of the brain

8. occurs in stage 4 sleep scary dreams

10. mental image of the environment

11. smallest language unit of sound

14. diminishing effect of a drug, larger and larger doses needed

15. complex molecule containing

genetic info

21. generalized or broaded belief about a group of people

22. sense of being male or female

23. level required to trigger neural impulses

24. Weshler Adult Intelligence Scale 27. famous case study of frontal lobe damage

30. where transduction occurs in ear

31. hyper activity, euphoric state
