

Sedimentary Rocks

Across

1. This clastic rock is easily split into flat pieces and fossils are often found in them
6. This organic rock is made up of swamp plants that formed millions of years ago, and changed into this rock
9. People have also used sedimentary rocks for
11. The process that presses sediments together
13. This Clastic Rock is formed with rock fragments with sharp edges

14. Small, solid pieces of material that come from rocks or living things

15. This organic rock is made from the different shells as well as coral; Coquina is a form of this rock

16. The process in which dissolved materials crystalize and glue particles of sediment together

Down

2. People have used sedimentary rocks for

3. This clastic rock is made up of rock fragments with rounded edges

4. A sedimentary rock that forms when rock fragments are squeezed together

5. The destructive process in which water, or wind loosens and carries away fragments of rock

7. Forms where the remains of plants and animals are deposited in thick layers

8. The process by which sediment settles out of the water or wind carrying it

10. This Clastic Rock is made of small holes between sand grains that allows the rock to absorb water

12. When minerals that are dissolved in a solution crystalize, this forms
