Nervous System Disorders

Across

2. "water on the brain"

3. saused by brain damage at birth, neuromuscular disability where voluntary muscles are poorly controlled

7. Myelin sheaths around fibers are gradually destroyed and turned into a hardened sheath called sclerosis

10. inflammation of the conjunctiva

12. bacteria or viruses spreading into the nervous tissue and cause brain inflammation

14. "vision going gray"

15. degeneration to dopamine-releasing neurons, causes overactive basal nuclei (inhibition)

17. muscles stay healthy and stimulated but movement is involuntary or uncontrollable

18. inflammation of meninges

19. cerebrum does not develop so child cannot hear, see, or process sensory inputs

20. nerve pulses do not reach intended muscles, no voluntary movement is possible and atrophy occurs

Down

1. lack of all three cone types in eye results in total _____

4. degenerative brain disease resulting in dementia and death

5. usually caused by a prolonged lack of vitamin A

6. problem with basal nuclei leading to difficulty walking and problems with other voluntary movements with starting and stopping (overstimulate)

8. infection of the eye caused by bacteria or viruses that are highly contagious

9. causes hazy and distorted visions or total blindness with aging

11. results from incomplete vertebrae formation- has several varieties

13. olfactory disorders (taste and smell)

16. clumsy, disorganized movement due to damage to the cerebellum
