

Name: _____ Date: _____ Period: _____

ALGEBRA CROSSWORD PUZZLE

Across

- 2.** a mathematical phrase which contains one or more variables
7. parallel to the plane of the horizon; at right angles to the vertical
9. the input values of a function (usually x)
10. a set of two or more equations using the same variables
11. ratio of vertical change to horizontal change in a non-vertical line; change in y over change in x
14. the output values in a function (usually y)
15. to make less complex by distribution, reducing, combining like terms, etc.

- 16.** the strength of a relationship between two data sets
18. a statement that two algebraic expressions are equal
19. a function of the form $y = a$ where a is a real number
20. any value of x for which $f(x) = 0$

Down

- 1.** a point where the graph of a function changes direction
3. a symbol, usually a letter, that represents one or more numbers
4. the shift of a graph of a function horizontally, vertically or both
5. a point at which a graph of a function crosses the x-axis

- 6.** a point at which a graph of a function crosses the y-axis
8. determining the arithmetic value of an expression by substituting number values for the variables
12. a change made to the values of a function which translates, reflects, rotates or dilates a graph of the function
13. the numerical factor in a term
17. a relation in which each element in the domain corresponds with exactly one element in the range
