# Cell Organelles: Structure and Function

- |   |                   |
|---|-------------------|
| 1. Jelly-like material the organelles are found in J                            | A. Nucleus        |
| 2. Control all cell activities. A   | B. Golgi complex  |
| 3. Provides energy for the cell C   | C. Mitochondrion  |
| 4. Controls the movement of materials in and out of the cell E                  | D. Endo reticulum |
| 5. Contain enzymes which break down and digest wasted and worn out cell parts F | E. Cell membrane  |
| 6. Rigid structure which provides support and protection in plant cells H       | F. Lysosomes      |
| 7. Package useful materials B   | G. Chloroplast    |
| 8. Series of canals used to transport materials in cell D                       | H. Cell wall      |
| 9. Allow plants to make their own food G  | I. Vacuole        |
| 10. Holds water, food and waste materials I                                     | J. Cytoplasm      |
