

Chapter Eight Oral Embryology and Histology

Across

2. Cells that resorb bone.
4. Natural opening in each root.
8. Fertilized Egg
11. Cells that cementum.
14. Cells that form Dentin.
15. The other portion of the pulp known as root pulp.
17. Formation of new teeth.

18. A calcified column or rod.

19. The lower jaw.

20. Microscopic canals found in Dentin.

Down

1. The space occupied by pulp.
3. Portion of tooth that is covered with enamel.
5. Highest point of the alveolar ridge.

6. Cells that resorb Cementum.

7. Cells that form bone.

9. Cells that form Enamel

10. Gingivae between the teeth.

12. The primitive mouth

13. Fibers found in dentinal tubules.

16. Tapered end of each root.
