

# Chapter 18 Wind and Wave Erosion

## Across

- 1. movement of sediments by jumps and bounces
- 4. sand that forms an underwater ridge
- 8. water current parallel to shoreline
- 11. beach deposit connecting island to mainland
- 13. pitted, grooved or polished rock

- 14. long ridge of sand that lies parallel to shore
- 16. area of shoreline made of deposited sediment
- 17. area where fresh and salt water mix

## Down

- 2. small body of water separated from the sea
- 3. deep bays with steep walls
- 5. offshore columns of rock once connected to a sea cliff

- 6. high and steep rock formation extending from shore
- 7. dry soil particles are blown away by the wind
- 9. long narrow deposit of sand connected to the shore
- 10. mound of wind deposited sand
- 12. raised section of beach
- 15. fine-grained sediment deposited by wind
