Name: _____ Date: _____ Period: _____

Unit 1: Linear Equations Vocabulary Quiz

Across

2. Having no boundaries or limits; impossible to measure or calculate.

4. A means of solving a problem.

6. Equal in value, amount or function.

7. In mathematics, a relationship between two mathematical expressions, asserting that the qualities have the same value, or that the expressions represent the same mathematical object.

9. An algebra property which is used to multiply a single term and two or more terms inside a set of parentheses.

10. A numerical or constant quantity placed before and multiplying the variable in an algebraic expression.

Down

1. An alphabetic character representing a number, value, which is either arbitrary or not fully specified or unknown.

3. In mathematics, a finite combination of symbols that is well-formed according to rules that depend on the context.

5. In mathematics, a statement of an equality containing one or more variables. Solving consists of determining which values of the variables make the equality true.

8. The relation between two expressions that are not equal, employing a sign such as "not equal to," > "greater than," or < "less than."
