

LAYERS OF EARTH CROSSWORD PUZZLE

Across

- the iron and nickel center of the Earth
- the thin, rocky, outer layer of the Earth that forms the Earth's outer skin.
- a dense ball of solid metal that is the hottest and densest layer of the Earth
- the liquid layer made up of hot liquid iron and nickel that surrounds the inner core
- a crack in the Earth's crust
- a shaking of Earth's surface
- broken up pieces of the lithosphere that move due to convection

Down

- has caused the surface of the Earth to change over long periods of time.
- is the lower part of the mantle
- A layer of the upper mantle that flows due to heat currents moving through solid rock
- an opening in Earth's surface through which magma is released
- The layer of hot, solid, material between the Earth's core and crust and takes up most of the Earth's volume
- the rigid uppermost part of the mantle that makes up the plates that move along the surface.
