

Name: _____

First Aid and CPR

Across

2. the cutting of skin to be stitched up at a later point

8. the third C; provide first aid to the victim

10. more severe burn; causes the burning of more layers of skin and may cause blistering

11. the use of back blows and abdominal thrusts to help dislodge a foreign object from a conscious choking victim

12. the losing of a limb

13. the act of pressing down on the chest during CPR; you do this 30 times in a row

15. using the heel of your hand hit the victims back in the Heimlich Maneuver

17. cardiopulmonary resuscitation; using compressions and rescue breaths to help and unconscious victim

18. deep cut and the ripping and tearing of the skin, tendons, ligaments, may expose bone, blood loss, requires a tourniquet

19. used to perform the Heimlich Maneuver by moving inward and upward in the center of the victim's chest

20. given to an unconscious victim who has something blocking their airway before rescue breaths

Down

1. least severe burn; burns the top layer of skin

3. most severe of the burns; usually results in the whitening or blackening of skin and is permanent

4. may result in stitches, blood loss, cuts through more layers of skin

5. the second C; notify authorities (9-1-1) of the situation

6. two deep breaths lasting one second each after compressions in CPR; tilt the head back to open airway before doing this

7. the first C; look at the safety of the scene and the status of the victim

9. something goes into the body and punctures the skin; do not pull out unless it is clear that it will not cause too much damage

14. causes deep sunken eyes, blushing/clammy skin, and rapid breathing

16. scrape or cut on the outermost layer of skin, may not lose blood, does not require stitches
