

# Plant Structure and Function

## Across

3. Fertilised ovum before it starts to divide into more cells.
5. Protects the flower bud before it opens.
6. The hollow, lower end of the carpel containing the ovules.
7. A long tube growing from a pollen grain through the style to the ovule
9. The coloured part of a flower that attract insects.
10. The female part of a flower, at the top of the carpel, that catches the pollen during pollination.
11. The male part of a flower that makes pollen

## Down

1. The male gametes of a flower.
2. Transfer of pollen from the stamen (the male part) of a flower to the stigma (the female part) of a flower.
4. The reproductive part of angiosperms (plants).
8. Receptacle within an ovary that contains egg cells.
