

Science project

Across

3. An ecosystem that is classified as having lakes ponds rivers or streams I can include a variety of habitats

6. Humid biome that receives lots of rain with a large variety of plant and animal species there two different types tropical and temperate these two different location and temperature

8. A group of land ecosystems with similar climates and organisms

11. A leaky roof formed by tall trees

12. An extremely cold dry biome that receives less than 25 centimeters of rain per year

14. The typical weather patterns over a long period of time

15. The movement of organisms from one place to another caused by wind water or other living things

16. Sheds its leaves and grow new ones each year

18. Soil that is frozen all year

19. A tree that produces its seeds in cones and that has needle-shaped leaves

Down

1. Colder climate region with coniferous trees cold snowy Winters and rainy Summers that are warm enough to melt the snow

2. An area that is populated mostly by grasses and other non-woody plants and receives 50-90 centimeters of rainfall each year

4. The very slow movement of the continents

5. An organism that is carried into a new location by people

7. A trait that helps an organism survive and reproduce

9. Big wrestling close to the equator that receives as much is 130 centimeters of rainfall per year

10. An area that receives less than 25 centimeters of rainfall per year

13. The study of where organisms live

17. A layer of shorter trees and Vines below the canopy
