The Endocrine Glands and Their Hormones

Across

- **2.** what gland secretes Thyroxine, and Triiodothyronine
- **5.** what hormone stimulates the liver to release glucose thereby increasing blood glucose levels
- **9.** this hormone comes from the hypothalamus and posterior pituitary gland
- **10.** epinephrine is secreted from which gland
- **11.** what hormone regulates mood, sexual development and daily clyes in response in environment
- 12. what gland produces melatonin
- **13.** promotes growth of all body tissues

- 14. what hormones initiates ovulation, and porgesterone production in females and stimulates testerone secretion in males
- **16.** stimulates growth and development of teste and penis
- **17.** controls the release of anterior pituitary hormones
- 18. is produced by the testes
- **19.** what hormone causes uterine muscle contraction and milk ejection from mamary glands
- **20.** what hormone stimulates milk production in mamary glands

Down

1. control the release of anterior pituitary hormones

- **3.** stimulates adrenal cortex to produce glucocorticoids (cortisol) and androgens
- 4. what gland secretes FSH and LH
- **6.** what hormone increases metabolic rate, influencing both physical and mental activies and required for normal growth
- 7. what gland secretes cortisol
- **8.** which regulates exchange of calcium between blood and bones
- **15.** what hormone increases blood glucose concentration in response to stress
