# Earth's layers

## Across

- 6. The part of the earth's crust that underlie the ocean basins
- 8. Upper layer of the earth's mantle below the lithosphere
- 9. Earth as a fluid layer of about 2300 km thick and composed of mostly iron and nickel
- 10. Solid part of the earth's crust that forms the large landmasses

## Down

- 1. The earth's inner most part and it has a primarily a solid ball with a radius of about 1220 km
- 2. Found undersea
- 3. Oceanic lithosphere sinks and dehydrates as it subsides
- 4. Rigid outer part of the earth consisting of the crust and upper mantle
- 5. A layer inside the terrestrial planet and some other rocky planetary bodies
- 7. The tough outer part of the earth.
