		L												

Across

- **3.** Triangle with sides of different lengths
- **12.** Triangle with all angles less than 90 degrees
- **14.** Parallelogram with four right angles

Down

1. Polygon with sides of equal length and angles of equal measure

- **2.** Quadrilateral that has two pairs of parallel sides
- **4.** Angles made by perpendicular lines
- **5.** Quadrilateral that has exactly two parallel sides
- **6.** Polygon with angles of equal measure
- **7.** A polygon with 4 sides

- **8.** Triangle that has at least two sides of equal length
- **9.** Polygon with sides of equal length
- **10.** Triangle with one angle measure greater than 90 degrees
- **11.** Special kind of geometric figure
- **13.** Equilateral parallelogram
