# Microorganism Crossword Puzzle

## Across

**2.** Having complex cells in which the genetic material is contained inside a nucleus

**6.** an organism made of many cells that cannot make its own food and cannot move; a member of the kingdom Fungi: Many fungi, like mushrooms, live on dead plant or animal material.

**7.** A single-celled or multi-celled organism with a simple biological structure

**10.** A kind of single-celled organism in kingdom Protista able to move by itself

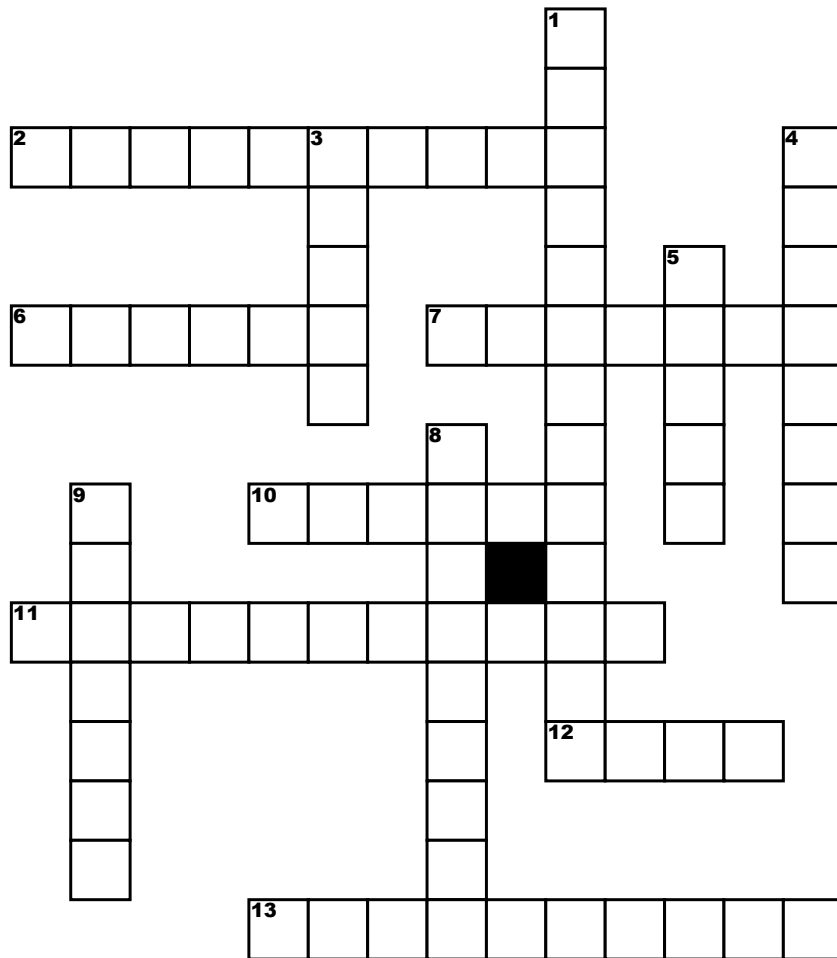

**11.** Individual microscopic organism with no nucleus

**12.** A fungus that grows in the form of multicellular filaments called hyphae. In contrast, fungi that can adopt a single-celled growth habit are called yeasts. ... The network of these tubular branching hyphae, called a mycelium, is considered a single organism.

**13.** Favorable or advantageous; resulting in good.

## Down

**1.** An organism too small to see with the human eye

**3.** A microscopic fungus consisting of single oval cells that reproduce by budding, and are capable of converting sugar into alcohol and carbon dioxide

**4.** Single-celled organisms without an organized nucleus

**5.** A sub-microscopic infectious agent that is able to grow or reproduce only within a host cell

**8.** To break down into nutrients.

**9.** Causing or likely to cause harm.
