

Name: _____

Date: _____

Cell organelles and Functions

Across

2. Organelle in plant cells where photosynthesis occurs. Converts sunlight to energy

3. Holds the cell in place

4. Digests food, gets rid of waste, protects from outside invaders.

6. Main power source of the cell that produces energy

7. Supports and protects the structure of the cell

8. Packages and distributes proteins out of the cell

9. Controls many functions of the cell often considered the cells brain, contains DNA

10. Encloses, protects, and controls movement in and out of the cell

Down

1. Transports materials. It also breaks down toxic material that could harm the cell

5. Makes protein and liquids and helps break down toxins
