

Weathering and Erosion

Across

3. is the upper surface of the ground
4. process of breaking rocks apart while retaining their chemical composition
8. process in which sediments, soil and rocks are added to a landform
9. is how easily water can flow through an aquifer
10. movement of soil or rock from one point to another by the action of the moving ice of a glacier

Down

1. is the breakdown of rocks by changing their chemical composition
2. is the area of land that is drained by a river system
5. layers of rocks or sediment that stores water and allows to flow
6. is how many spaces there are between particles of rock
7. when soil particles from the land surface transports by the wind
