

We Love Our Natural Resources!!!

Across

1. Inexhaustible energy resource that used hot magma, or hot dry rocks from below the earth's surface to generate electricity

3. Alternative energy source that is based on atomic fission

6. Non renewable energy resource, such as oil and coal, formed over many of years from the remains of dead plants and organisms

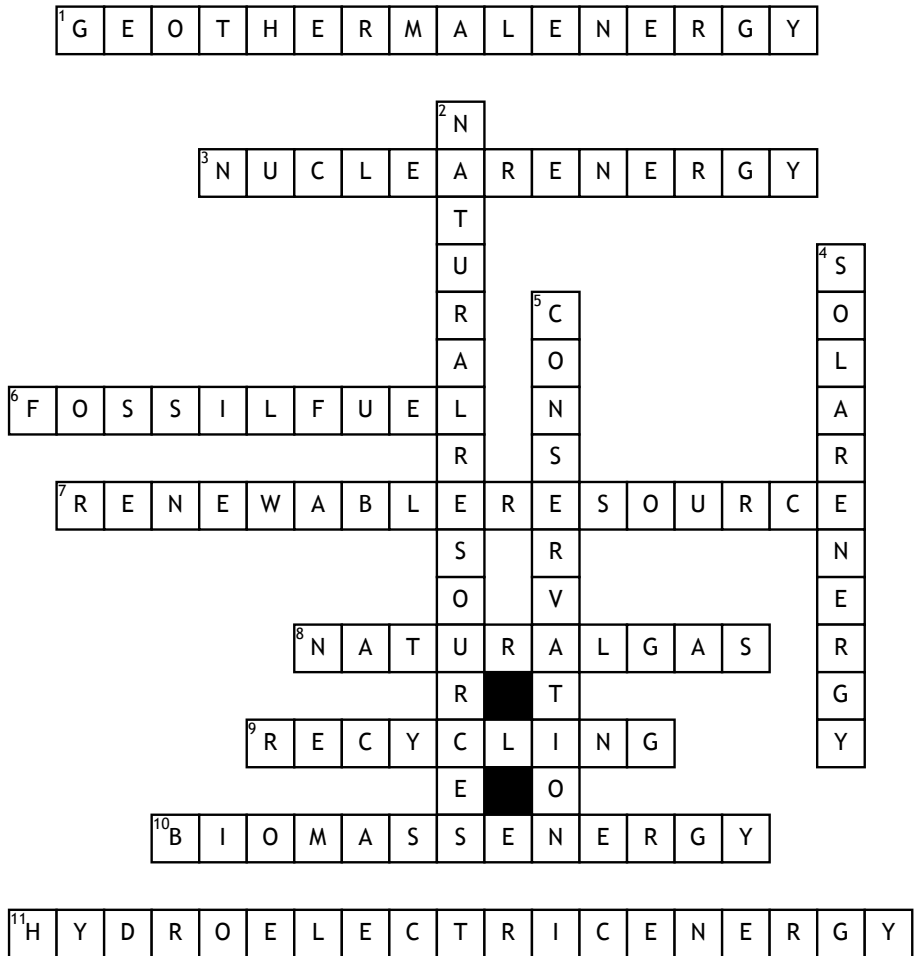

7. A natural resource that can be used and replaced over a relatively short time

8. Fossil fuels formed from marine organisms that is often found in tilted or folded rock layers and used for cooking and heating

9. Conservation method in which old materials are processed to make new ones

10. Renewable energy derived from burning organic materials such as wood and alcohol.

11. Electricity produced by water power using large dams in a river

Down

2. Any material made naturally that is used by humans or living things.

4. Energy from the sun that is clean, inexhaustible, and can be transformed into electricity by solar

5. Careful use of resources to reduce damage to the environment though such methods as composting and recycling materials.
