# Earth's changes

## Across

5. A type of landform that is a tall sloped raised area on the Earth's crust
6. Topographic maps show the shapes of \_\_\_\_\_ features and how high they are above sea level.
7. A force that breaks down something
9. By studying contour lines, you can learn the \_\_\_\_\_ and steepness of the land.
10. The dropping, or releasing, of sediments that have been moved from one place to another.

## Down

1. A type of weathering that is a breakdown of rocks by changing its composition.
2. A type of force that builds up the land.
3. Type of erosion responsible for the creation and destruction of sand dunes
4. A type of weathering where Ice, moving air, and water breaks down large rocks into smaller pieces of rocks, called sediment.
8. The carrying away of sediments by moving water, wind, or moving ice
