

Earth In Universe

Across

4. objects that orbit the earth that are not man-made the moon is an example

6. special engine that can work in space and burns liquid or solid fuel

12. An artificial body placed in orbit around the earth, moon, planet in order to collect information or for communication

14. A mixture of gases that surrounds a planet or moon

15. A vehicle sponsored by sixteen nations that circles the earth while carrying out experiments

19. A device built to observe distant objects by making them appear closer.

20. A group of stars that form a pattern in the sky

21. unmanned spacecraft that collect data with scientific instruments and communicate with the Earth

22. All of the frequencies or wavelengths of electromagnetic radiation

23. a telescope that uses a curved mirror to collect and focus light

24. reusable spacecraft that carry cargo, astronauts, and satellites to and from space

Down

1. Occurs when the moon passes directly between the Sun and the Earth and casts a shadow over part of the Earth

2. A collection of stars, dust, and gas bound together by gravity

3. The movement of an object around another object

5. The two days of the year in which the Sun reaches its greatest distance north or south of the equator

7. An attractive force that acts between any two objects

8. Large space telescope able to see farther than any other telescope at the end of the 20th century

9. a telescope that uses convex lenses to gather and focus light

10. The spinning of Earth on its axis

11. A division of the year that is characterized by recurring weather conditions and is determined by both Earth's tilt relative to the Sun and Earth's position in its orbit around the sun

13. the time or date (twice each year) at which the sun crosses the celestial equator, when day and night are of equal length (about Sept 22 and Mar 20)

16. A elongated circle, or oval shape, the shape of the planets orbit

17. the regular rise and fall of the oceans surface influenced by the moons gravity pulling on Earth

18. the blocking of sunlight to the moon that occurs when Earth is directly between the sun and the moon
