

Function of the male and female reproductive organs

Across

- 2. Glands that produce the female sex hormones and eggs
- 6. A sperm storage area that links the testes with the vas deferens.
- 9. joins the uterus and the vagina, it's the part that opens when a baby is being born
- 11. The male reproductive cell that fertilises the female egg
- 12. the organ used in sexual intercourse that releases sperm in the vagina
- 13. Joins the uterus to the outside of the body, this is where sperm is released during sexual intercourse
- 14. Folds of skin that protect the opening to the vagina
- 15. Surrounds the urethra under the bladder and secretes a fluid that assists with the movement of sperm

Down

- 1. Loose pouch of skin responsible for storing the testes at an optimum level for sperm production
- 3. Small glands that add fluid to the sperm to produce semen
- 4. A small sensitive organ located just above the vaginal opening
- 5. Tube used to transport sperm and semen to the urethra and penis
- 7. Carries urine and sperm to the outside of the body
- 8. The femal sex cell
- 10. Responsible for the production of sperm and testosterone
