

weather

Across

- 3.** this is an electrical discharge formed when electrical particles in a thunderstorm jump
- 6.** this front forms when a faster moving cold air mass runs into a slow warm air mass
- 8.** this front is formed when a warm air mass is caught between two cold air masses
- 11.** this front forms when a fast warm air mass overtakes a slow cold air mass
- 12.** this is the opposite of a cloud
- 15.** this storm is electrically charged and often forms in cumulonimbus clouds
- 18.** this storm is a rapidly whirling funnel shaped cloud that comes from a thunderstorm
- 19.** the intensity of this star can affect rainfall
- 21.** these air formations store water particles
- 22.** this sphere contains earths weather
- 23.** this is a high stratus cloud and may indicate precipitation
- 24.** this storm begins in over warm ocean water as a low pressure area
- 25.** these clouds form in flat layers and bring drizzle rain or snow

Down

- 1.** rainfall a place recieves
- 2.** this is a wispy cloud that brings fair weather
- 4.** these are cumulus clouds that form high up and may indicate precipitation
- 5.** these scientists study and try to predict weather
- 7.** this side of the mountain has little precipitation
- 9.** these clouds look like cotton balls and indicate a storm is on its way
- 10.** these are tall cumulus clouds that indicate a storm
- 13.** this front is formed when warm and cold air masses meet but neither overcomes the other
- 14.** this cloud looks cotton and often brings fair weather
- 16.** these geographical co-ordinates affect the weather
- 17.** this the average weather of an area
- 20.** clouds that form on the ground
