Name:	Date:

Earth's Layers

Across

- 7. physical lower part of the mantle that movesmore slowly than the asthenosphere/ the middle physical layer
- 10. an instrument used to detect and measure seismic waves from earthquakes
- 11. thinnest, least dense and solid outermost layer of the earth
- 12. outer physical, stiff layer that includes the crust and part of the upper mantle; makes up tectonic plates that move around the earth's surface

																¹ T

Down

- 1. pieces of lithosphere that move around on topof the hot, flowing asthenosphere
- 2. physical layer below the lithosphere made of to tock that flows very slowly (like silly putty)
- **3.** liquid layer above the inner core made up mostly of iron and nickel
- **4.** innermost, hottest layer of the earth

- **5.** waves produced during earthquakes that cantravel through the earth, scientist use these to determine the structure of the earth's interior
- **6.** solid center of the earth made mostly of iron and nickel
- **8.** thicker, more dense, and hotter compositional layer between the crust and the core
- **9.** how compact a substance is in a certain area
