Textile Terms To Know

Across

2. The threads that run parallel to the selvedge
3. The crosswise threads of the fabric. The true bias makes a 45° angle with the straight threads and is stretchy
6. The strong outside edge of a piece of fabric
7. A special type of cotton used for sewing
10. The cloth formed from yarns being woven or knitted together
11. The raised surface of a fabric that may pick up the light differently when held in various positions and traps

Down

1. The raw material (single thread) such as cotton, wool, or silk which is spun into a yarn
4. Thin or thick yarns are twisted together to varying thicknesses, especially common in wool
5. The threads that run from selvedge to selvedge, across the width of the fabric
8. A group of fibres spun together to make a long strand suitable for making into material (fabric)
9. Usually indicated by an arrow on patterns to show the direction to place them on the fabric
