

Name: _____

Date: _____

Electricity chapter 6

Across

2. is able to change alternating current to direct current

4. Which High Frequency method creates an even more powerful ozone effect by slowly lifting the electrode away from the skin

5. Measurements is a unit of electric strength

8. Terms defines a machine that converts mechanical energy into electrical energy

14. A type of phoresis that allows an alkaline solution to enter the skin when assisted by Galvanic Current and the negative pole of an electrode is called

15. A device that indicates the amount of current flowing through equipment and regulates the amount with a dial or knob is a

16. A negatively charged electrode is called a

17. Material that allows electricity to flow through it easily is called

18. Which type of phoresis is often used in desincrustation

19. What effect does a rotating brush produce

Down

1. UVB rays stimulate the production of

3. The application of electrical currents during treatments to the skin is called

6. A form of thermal energy in which the transfer of heat is via liquid or gas is called

7. A volt is a unit of electric

9. When the electrode held by the esthetician is in the positive mode, the reaction on the skin will be

10. More electrical current flowing through a line than the line is designed to carry is called

11. The electrode most likely to be selected for stimulating the scalp is called the

12. Which of the following terms is a unit of electric pressure

13. Measures how much electrical energy is being used
