

Freshwater Ecological Concepts 2

Across

3. Biofilm on hard substrate in rivers
5. Bottom dwelling organisms
8. Fish spawning migration from fresh to saltwater
9. Organic matter larger than 1 mm
10. Downstream distance a nutrient moves while in an organism

11. Fish spawning between stones

13. Continuous accidental drift at low densities

14. Nutrient enrichment

Down

1. Functional feeding group of net-spinning caddisflies and blackfly larvae

2. Imported organic matter

4. Migration from native range to new ecosystem

6. Predation technique of pike and water scorpion

7. Region of sediment and porous space beneath and alongside a stream bed

12. General limnological term for standing water bodies
