

EOC Review

Across

1. parallelogram with four congruent sides and the diagonals are perpendicular bisectors
5. quadrilateral with two pairs of parallel sides and diagonals that bisect each other
8. the opposite side divided by the hypotenuse
11. an infinite number of points a fixed distance from a center point on a coordinate plane

13. sliding an image on a coordinate plane

14. changing an image on a coordinate plane by reflecting it, rotating it, dilating it, or sliding it

15. parallelogram with four ninety-degree angles and congruent diagonals

Down

2. quadrilateral with one pair of parallel sides
3. two lines with the same slope that never intersect are _____

4. two lines with opposite reciprocal slopes and intersect at ninety-degree angles are _____

6. results in a similar shape of a proportionate size

7. flipping a shape about an axis

9. turning a shape about a given point on a coordinate grid

10. parallelogram with four congruent sides and four right angles

12. the adjacent side divided by the hypotenuse
