

Name: _____ Date: _____ Period: _____

Unit 6 Probability Vocabulary

Across

- 5. The probability of the non-occurrence of a desired outcome
- 7. A ratio between the number of desired outcomes to the total possible outcomes
- 8. A subset of the population selected without bias
- 9. A conclusion or prediction based on data
- 10. An experiment or model used to test the outcomes of an event
- 11. The likelihood of an event occurring without conducting an experiment

Down

- 1. The likelihood of an event occurring from the outcomes of an experiment
- 2. Total collection of persons, objects, or items of interest
- 3. The result of an action or event
- 4. A set or subset of outcomes from a single action or activity when the outcomes cannot be subdivided (flipping a coin, rolling a number cube)
- 6. A subset of the population selected in order to make inferences about the entire population
