

Period: _____

cell cycle

Across

- 3. Division of the nucleus
- 6. Fibers pull chromatids away towards opposite poles
- 8. Most of the time the cell is in this stage
- 9. contains general material instructions to direct cell
- 10. When chromosomes uncoil

Down

1. Division of cytoplasm
2. It is the middle phase of the cycle
3. The point on a chromosome by which it is attached to a spindle fiber during cell division
4. Chromatin coils to form chromosomes
5. The sequence of growth and division in a cell
