

Name: _____

Date: _____

Lifespan Motor Development

Across

4. Refers to the quantitative structural changes that occur with age
7. Parasite that resides in the intestines of animals and is passed via animal feces
9. Bone removing cells
15. Mild traumatic brain injury
17. A type of muscle fiber that is slow-twitch
18. This answer is an abbreviated word. It refers to the maximum rate of growth in body height
21. Makes colorless night vision possible
24. Form of jumping in which the landing occurs on the nonpropelling leg
25. A person's manner of walking
28. The number of times the heart beats each minute
31. A forward step followed by a leap onto the trailing foot
32. Measure of standing height. This is the distance between the vertex and the floor
33. Negative stereotypes concerning older adults
35. The individual attempts to adjust existing thought structures to account for new experiences
37. Same as the gallop, except this is performed sideways
39. Factors that limit, contain, or help shape the development of movement
40. Another form of striking

41. Performer uses a designated body part or some implement to project an object

Down

1. Total loss of vision
2. Type of play where the child creates imaginary representations with objects in the environment
3. The ability to control the body's position in space for the purpose of maintaining a static position or engaging in a dynamic position such as walking
5. A muscular force exerted against a movable object, with a change in the length of the exercised muscle
6. A process by which children attempt to interpret new experiences based on their present interpretation of the world
8. An unpleasant emotional state
10. This answer is an abbreviated word. It refers to the volume of blood pumped from the left ventricle into general circulation via the aorta.
11. A system of collecting data in question-and-answer sessions to understand more fully the process of thinking
12. This answer is an abbreviated word. It refers to the measures of weight and height that are frequently combined to yield a measure
13. Occurs as a function of both osteoblastic and osteoclastic activity
14. Occurs when the body temperature falls significantly below normal

16. Bouncing of a ball by using the hand to push the ball repeatedly downward

19. Striking an airborne ball with the foot
20. Highest point on the skull
22. Small yellow deposits in the retina that are an early sign of age-related macular degeneration (AMD)
23. This answer is an abbreviated word. It refers to a noninvasive radiologic technique that measures and differentiates tissue densities
26. This answer is an abbreviated word. It refers to the maximum rate of growth in body weight
27. This answer is an abbreviated word. It refers to the amount of bone mineral in bone tissue
29. Makes color vision and acuity possible
30. The set of expectations about behavior
34. A muscular force exerted against an immovable object with very little change in the length of the exercised muscle
36. To propel something with force through the air by a movement of the arm and hand
38. Refers to the return to an inherent growth trajectory after a deviation from that path
