

# The Immune System

## Across

- 5.** A disorder in which respiratory passages narrow significantly.
- 8.** The proteins produced by B Cells.
- 9.** A disorder in which the immune system is overly sensitive to a foreign substance.
- 10.** A cell that identifies pathogens and distinguishes different pathogens from each other.
- 11.** The molecules that the immune system recognizes as either part of the body or coming from outside the body.

## Down

- 1.** An imbalance or misuse of insulin in the body.

- 2.** A chemical that kills bacteria or slows their growth without harming cells.
- 3.** The body's ability to destroy pathogens before they can cause disease.
- 4.** The process by which harmless antigens are purposefully introduced to a person's body to produce active immunity.
- 6.** The body's first line of defense against pathogens.
- 7.** Lymphocytes that produce proteins that help destroy pathogens.
