

# Natural Selection and Selective Breeding

## Across

2. the process by which forms of life adapt to environmental pressures causing species to survive and reproduce with variations.
3. the primary organism that charles darwin investigated on the galapagos island
10. adaptations of an organism such as hollow bones, breathing, and feeding types

## Down

1. favorable traits that are passed on to the next generation by breeders or farmers
4. the scientist which theorized about evolution by natural selection
5. a tool used to identify organisms based on their characteristics
6. the changing of an organisms color for survival
7. organisms have \_\_\_\_\_ types of traits
8. the way an organism changes for survival
9. differences within species
