

Cell Growth and Division

Across

- 2. complex family of hormones produced by the body
- 4. cytoplasm of cell is divided
- 5. DNA is distributed into two daughter cells
- 10. a disease in very infectious effect
- 13. high alkaline proteins
- 15. first stage of mitosis
- 16. final stage of mitosis
- 17. stage of mitosis when replicated chromosomes are split

19. reproduction involving only one parent

20. half of two copies of a chromosome

21. organized structures of DNA

22. a disease in non-harmful effect

Down

1. form of asexual production used by prokaryotes

3. process of programmed cell death

6. spread of cancer in the body

7. anything directly involved in causing cancer

8. protects end of chromosome from fusion

9. second stage of mitosis

11. general term for diseases

12. part of chromosome that links sister chromatids

14. material that makes up chromosomes

18. regular sequence of division and growth cells undergo
