

# Biomass Energy

## Across

- Organic matter used as fuel, especially in a power station for the generation of electricity
- What is the gas that biomass makes called
- What type of energy source (resource) is biomass?
- Largest biomass resource today
- Biomass energy is harmful to the Earth's ozone layer because it increases
- oil rich algae can be converted into liquids and used as
- What type of energy does all biomass contain?
- one of the oldest ways to convert biomass to energy
- What does burning biomass release?

## Down

- A method where biomass is heated, not burned to create energy
- a vegetable that can be used to make biomass energy
- This is a method of heating biomass
- obtained from biomass
- What can be caused by the large amount of trees used to create energy
- Biomass can also be directly converted to energy through
