

Three classes of rocks

Across

6. weathering breaks down rocks into fragments
 8. the rising of regions of the crust to higher elevations
 9. when cooled becomes a new rock
 10. a naturally occurred solid mixture of one or more minerals
 12. breaking down rocks

13. forms when minerals that form from solution or sediment from older rock get pressed and cemented together

Down

1. forms when magma or lava cools and hardens to become solid
 2. series of processes in which rock changes from one type to another is called

3. the sinking of regions of the crust to lower elevations
 4. forms when pressure, temp. or chemical process change existing rock
 5. an area where a set of deep cracks form
 7. the process by which sediment is moved from one place to another
 11. another word for molten rock
