

Milady Chapter 5 Infection Control

Across

- 3. the presence or the reasonably anticipated presence of blood or the other potentially infectious materials on an items surface
- 4. any organism of microscopic or submicroscopic size
- 6. contact with non-intact skin or blood or body fluid or other potentially infectious materials
- 10. determination of the nature of a disease from its symptoms
- 13. a chemical process of reducing the number of disease-causing germs on cleansed surfaces to a safe level
- 14. a chemical process that uses specific products to destroy most bacteria
- 15. colonies of microorganisms that adhere to environmental surfaces as well as the human body

- 16. a type of fungus that affects plants or grows on inanimate objects but does not cause human infections in the barbershop
- 17. a mechanical process using soap and water
- 19. a parasitic submicroscopic particle that infects and resides in cells of biological organisms
- 21. harmful microorganisms that can cause disease or infection in humans when they invade the body
- 22. the ability of a product to produce the intended effect
- 23. single-celled microorganisms that have both plant and animal characteristics
- 24. the invasions of body tissues by disease--causing pathogens

Down

- 1. disease-causing microorganisms carried in the body by blood or body by fluids such as hepatitis and HIV

- 2. transmission of blood or body fluids through contact with an intermediate contaminated object
- 5. organisms that grow and feed and shelter on or inside another organism
- 7. showing no symptoms or signs of infection
- 8. able to be communicated
- 9. also known as reusable
- 11. the process that completely destroys
- 12. harmless microorganism that may perform useful functions and are safe to come in contact with since they do not cause disease or harm
- 18. single-celled organisms that grow in irregular masses and include molds
- 20. a condition in which the body reacts to injury or irritation or infection
