Matrix Vocabulary

Across

- **2.** requirement to be able to add or subtract two matrices
- **4.** term used if two matrices cannot be multiplied
- 8. the order of a matrix where the number of rows is the third triangular number and the number or columns is the fifth triangular number
- **10.** matrix with zero in every component
- **13.** the order of a matrix which has 8 columns and one fewer rows

- **14.** type of matrix in which the number of rows is equal to the number of columns
- **15.** word for each entry inside a matrix
- **16.** the word to describe the multiplicative property A(BC) = (AB)C

Down

- 1. what matrix multiplication always is
- **3.** the word for the original shape in a transformation

- **5.** order of a matrix produced by multiplying an m by n matrix by an n by p matrix **6.** a synonym for the identity matrix
- 7. the word to describe the multiplicative relation AB = BA 9. the number of rows in a square matrix of order 7
- 11. word for a point which is not altered by a transformation
- **12.** the word for the new shape after a transformation
