# Evolution Crossword Puzzle

## Across

- 2. A change in the allele frequency of a population as a result of chance events rather than natural selection.
- 4. Ability of an animal to look like another more harmful animal
- 5. The sequence of events involved in the evolutionary development of a species or taxonomic group of organisms
- 6. A process in which individuals that have certain inherited traits tend to survive and reproduce at higher rates than other individuals because of those traits.

- 7. Ability of an organism to survive and reproduce in its environment

8. Process by which unrelated organisms independently evolve similarities when adapting to similar environments

9. Structures that do not have a common evolutionary origin but are similar in function

10. A structural adaptation that enables an organism to blend in with its environment

## Down

- 1. Breeding organisms with specific traits in order to produce offspring with identical traits.
- 3. A trait that helps an organism survive and reproduce
