

# Levels of organization

## Across

2. an organism that is hunting
6. place where an organism or a biological population normally lives or occurs.
9. an interacting group of various species in a common location
11. made up of plants, animals, microorganisms, soil, rocks, minerals, water sources and the local atmosphere interacting with one another
12. A group of organisms of one species that interbreed and live in the same place at the same time

14. a nonliving condition or thing, as climate or habitat, that influences or affects an ecosystem and the organisms in it
15. a large naturally occurring community of flora and fauna occupying a major habitat

## Down

1. is a non-mutual relationship between species, where one species, the parasite, benefits at the expense of the other, the host.
3. An individual living thing that can react to stimuli, reproduce, grow, and maintain homeostasis
4. any living component that affects the population of another organism, or the environment

5. refers to a close and prolonged interaction between organisms of different species

7. a class of relationships between two organisms where one organism benefits from the other without affecting it.

8. the organism that is attacked

10. the way two organisms of different species exist in a relationship in which each individual benefits from the activity of the other.

13. refers to the way in which an organism fits into an ecological community or ecosystem.
