# Lab Safety and Equipment

## Across

5. It is like a burner but with a silver plate on top.

7. It is like a telescope but instead of seeing far away you can see up close and personal with this.

10. A glass tube with a rubber bulb at the end.

11. Keeping away from danger.

14. Keeping hair out of face.

15. A pair of pincers or tweezers.

17. This is a situation where you did something wrong and you need help right away.

18. That red cylindrical thing attached to the wall that has white foam stuff in it.

19. A flat wooden stick with measurements on it, not a meter or yard stick.

20. Cleaning your hands with water, because this is common sense, after dealing with chemicals.

23. The thin clear sheet that you put on top of something that is on a slide.

## Down

1. This is called not being a jerk and picking up after yourself because your teacher already has to watch you for an hour, don't make their job any harder than it has to be.

2. A substance that has been purified.

3. This is what you hold the substances that you are testing in.

4. The little cylinder like thing that tests the temperature of an object.

6. Glasses you wear to protect your eyes, regular glasses don't count.

8. A protective blanket used in case a flame appears.

9. The thing that keeps track of time for you, not a clock.

12. That really pretty dancing light that you want to touch, but when you do touch it, it hurts like heck "OWW! BAD SQUISHY, BAD SQUISHY!"

13. A station where you can wash your eyes out when you do something stupid.

16. Open flamed cylinder object.

21. The thing you wear to protect your clothes.

22. A container or bottle, fat at the bottom and skinny in the neck.
