

Chapter 1 - Introduction to Computers

Across

1. A wireless computer mounted on a mobile cart
4. Use finely focused laser beam to read and write data
8. A type of software
10. Uses tiny nozzles to spray ink on paper
11. Lightweight computer that uses touchscreen
12. Security device that controls access from the Internet
15. Converts characters, images and text to digital data

17. Input device used to capture video images in real time
18. Easily transported wireless computer
19. A type of programming language
20. Another word meaning quality of the image

Down

2. Input device that emits an electronic signal
3. Network that can reach across wide geographic areas

5. Network lined up on a single cable
6. Small disk files that contain software codes
7. A computer and network connection
9. Sends signal from router to PC
13. Magnetic storage media inside a computer
14. Routes data between networks using IP address
16. Long Term Memory
