## Chapter 1 - Introduction to Computers

## **Across**

- **1.** A wireless computer mounted on a mobile cart
- **4.** Use finely focused laser beam to read and write data
- 8. A type of software
- **10.** Uses tiny nozzles to spray ink on paper
- **11.** Lightweight computer that uses touchscreen
- **12.** Security device that controls access from the Internet
- **15.** Converts characters, images and text to digital data

- **17.** Input device used to capture video images in real time
- **18.** Easily transported wireless computer
- **19.** A type of programming language
- **20.** Another word meaning quality of the image **Down**
- 2. Input device that emits an electronic signal
- 3. Network that can reach across wide geographic areas

- **5.** Network lined up on a single cable
- **6.** Small disk files that contain software codes
- **7.** A computer and network connection
- 9. Sends signal from router to PC
- **13.** Magnetic storage media inside a computer
- **14.** Routes data between networks using IP address
- **16.** Long Term Memory
