

## Dental Terminology MOD C Week 2 Ch 38,46 and 54 12 ed

### Across

4. Substance that modifies or increases the rate of a chemical reaction
5. Infectious condition in which the pulp is incapable of healing which would then require root canal therapy
7. Differences in degrees of blackness on a image
9. Complete removal of vital pulp from a tooth
10. Device used to protect the reproductive and blood-forming tissues from scatter radiation

### Down

1. Surgical separation of a multirooted tooth through the furcation area
2. Irreversible hydrocolloid material used for taking preliminary impressions
3. Concept of radiation protection that states that all exposures should be kept as low as reasonably achievable
6. Examination technique that involves tapping on the incisal or occlusal surface of a tooth to assess vitality
8. Gelatin-type material derived from seaweed
