

Answer Key

Across

- 2. Hardware and software that is designed or can be used to support the needs of exceptional students
- 6. Low tech assistive devices that are acrylic or metal covers with holes for each key that is placed on a keyboard. The guards increase typing accuracy by allowing only one key at a time to be pressed
- 9. Assistive device that can magnify a display supporting students with limited vision
- 10. Books and documents that have already been converted into or written for an electronic format

- 11. Assistive devices that offer a larger surface area and larger keys than a standard keyboard for supporting students who lack fine motor skills
- 12. The process of building bridges from prior knowledge as a baseline and moving students beyond that point
- 13. can assist students who can understand material at their grade level when they hear it but have difficulty with decoding and comprehending when they read it

Down

- 1. An approach for gifted students that recognizes and targets instruction to varying abilities found in the same classroom

- 3. Assistive device that can magnify a display supporting students with limited vision
- 4. Programs that can make an educated guess about the word a student is typing based on the first few letters. It can help reduce the number of keystrokes required
- 5. Assistive device, a keyboard that can be configured to an individual student's needs
- 7. An assistive device on a key board that allows students to press keys sequentially to execute functions that typically require pressing keys simultaneously
- 8. A display that responds to human touch. Rather than using a mouse or a pointer, the icon on the screen is touched.
