

# Knowing The Sewing Machine Parts

## Across

2. has measurements to help you sew straight, supports fabric during sewing
3. guide when making buttonholes
12. is actually a tension disc that regulates tension for bobbin winding
13. moves fabric along under pressure foot
14. set tension according to fabric, stitch, and thread-how tight the thread is being pulled
15. leads thread to needle

## Down

1. change stitch length and width (creates zig-zags)
4. attaches pressure foot to machine-buttons to release foot and can change easily to attach different feet
5. hold the top thread in place
6. holds fabric against feed system/teeth
7. can stitch backwards to lock stitches into place
8. guides thread when winding bobbins
9. raises and lowers pressure foot
10. controls movement of take up lever and needle, turn wheel towards you to stitch slowly
11. controls flow of needle thread-must be threaded properly or machine will not work correctly
