

Basic Geometric Terms

Across

5. Two angles whose sum is 180 degrees.
7. A straight path that goes on infinitely in either direction.
8. A unit used to measure an angle.
9. An angle that measures more than 180 degrees but less than 360.
12. A point where two angles begin or meet.
14. Two angles that are next to each other.
16. An angle that measures 180 degrees.
17. A line that goes from side-to-side.

19. When a figure is folded in half and the two halves match perfectly.

21. Two angles whose sum is 90 degrees.

23. Never ending.

24. An angle that measures more than 90 degrees but less than 180.

25. Two rays that have a common end point

Down

1. Two lines that form right angles where they intersect.

2. A line that goes up and down

3. A math tool used for measuring or drawing angles.

4. Where lines cross over a common point.

6. A straight path that has a beginning and an ending.

10. Two lines that never cross or touch.

11. Angles that are opposite each other when two lines intersect.

13. An angle that is $\frac{1}{4}$ of a circle.

15. Something that has an end.

18. The middle point.

20. A straight path that has a beginning but not ending.

22. An angle that measures more than zero degrees but less than 90.
