

Name: _____

Date: _____

Cell Membrane

Across

3. a movement across of ions and other molecular substances across the cel membrane without ATP
4. Allows only certain materials to enter (or cross if it's a cell membrane). Synonym for semipermeable.
5. An area that has a lower solute concentration than another location
7. Movement across a membrane that requires the help of integral proteins; does not require energy because it follows the concentration gradient (high to low).
9. An area that has an equal solute concentration compared to another location.
10. Energy free transport across a membrane; includes diffusion and facilitated diffusion.

Word Bank

Facilitated Diffusion
 Passive transport
 Hypertonic
 Isotonic

Selectively Permeable
 Diffusion
 Water Potential
 Hypotonic

Osmosis
 Concentration Gradient
 Passive Transport

11. The movement of molecules following the "normal flow"; movement of molecules from high concentration to low concentration.

Down

1. The tendency of water to move locations; water moves from areas of high concentration to areas of low concentration.
2. An area that has a higher solute concentration than another location.
6. The diffusion of water across a membrane.
8. the movement of particles from areas of high concentration (crowded) to areas of low concentration (not crowded).
